Footnotes:

1 Data begin in 1926 for Canada and all provinces except Newfoundland and Labrador for which data begin in 1972.

6 From 1926 to 1970, total net income equals total gross income less operating and depreciation charges.

7 From 1971 to date, total cash receipts minus operating expenses after rebates equals net cash income.

9 Payments to potato growers for losses sustained as a result of fusarium rot in the 1960 potato crop.

x Suppressed to meet the confidentiality requirements of the Statistics Act

Footnotes:

- 1 Data previous to 1971 see CANSIM table 002-0014.
- 2 Beginning in 1972, Newfoundland and Labrador is included.
- 3 Less than \$500 is reported as 0.
- 5 As of 1992, crop insurance payments no longer include payments under private hail insurance plans. Generally, these are programs to deal with unusual climatic and/or economic conditions in the agriculture sector. Starting in 1999, payments under the Western Grain Stabilization, Tripartite Plans and the Gross Revenue Insurance Plan are included in other payments.
- 6 As of 2001, receipts from Wool, Pregnant mare's urine, Horses and Embryos are accounted for in Miscellaneous livestock and livestock products.
- 7 Prior to 2001, receipts from grapes and blueberries were included in Other berries and grapes. The categories Other berries and grapes and Strawberries, taken together, are equal to Total small fruits.
- 9 The category total small fruits comprises receipts from the sale of numerous small fruits. Blueberries, strawberries and grapes
- 10 Field vegetables includes mushrooms and excludes potatoes and pulse crops.
- 11 The category total tree fruits comprises receipts from the sale of numerous tree fruits. Apples is one of the components of total tree fruits.
- 12 As of 2012, receipts from sugar beets in Alberta are accounted for in miscellaneous crops.
- Beginning in August 2012, changes in legislation removed the Canadian Wheat Board (CWB) as the sole buyer and seller of Western wheat and barley for export and domestic human consumption. Subsequently, the quantity of these grains marketed via pool accounts declined. Producer payments from the pool accounts in the Western provinces, are now reported in the wheat, durum or barley receipts as of August 2012. As of January 2016, producer payments from the Ontario Wheat Producers' Marketing Board are included in the Ontario wheat receipts.
- 13 Preliminary farm cash receipts estimates for potatoes are unreliable pending the availability of administrative data at the end of the crop year.
- 15 Source data for the value of greenhouse vegetables, on a crop year basis, are available in CANSIM table 001-0006.
- 16 Source data for the value of field vegetables, on a crop year basis, are available in CANSIM table 001-0013.
- 17 Source data for the value of fruits, on a crop year basis, are available in CANSIM table 001-0009.
- Beginning with the 2015/2016 crop year, the monthly marketings used in the calculation of Ontario barley and oats receipts are as reported by the Grain Farmers of Ontario.
- Source data for the value of floriculture and nursery products are derived from the annual Greenhouse, Sod and Nursery Survey. As of 2016, operations which exclusively produce tree seedlings for reforestation are outside the scope of the survey.

Footnotes:

- 1 Data begin in 1926 for Canada and all provinces except Newfoundland and Labrador for which data begin in 1972.
- 2 For data prior to 1971 see CANSIM table 002-0015.  
Starting in 1986, the following were combined: cash wages and room and board; repairs to buildings and repairs to fences; fertilizer and lime expense; fertilizer and lime rebates. Starting in 1990, legal and accounting fees were taken out of other expense. As of 1997, hatcheries and farms with only christmas trees became part of the agriculture sector. The inclusion of
- 3 hatcheries has increased all expenses except poultry purchases.
- 4 The total operating expenses after rebates includes all gross operating expenses minus rebates.  
Downward adjustments in the potato commercial seed percentage from 1997 to 2004 and again from 2005 to present have
- 5 precipitated a break in the series. Hence comparisons with previous years are affected.  
In December 2013, the 2012 interest and total operating expenses after rebates items by province and Canada were corrected.
- 6 The 2012 data in this table were last revised in November 2014.

Footnotes:

1 Data begin in 1971 for Canada and all provinces except Newfoundland and Labrador for which data begin in 1981.

2 For further information please contact the Farm Income and Prices Section, Agriculture Division, Statistics Canada.

Starting in 1992, trust companies affiliated with the chartered banks are included under the chartered banks category; prior to 1992, the trust companies were included under the insurance companies and other lenders category.

In June 2015, Statistics Canada received updates to source data from an external organization. As a result, data in the Farm Debt Series for reference periods 2012, 2013 and 2014 have been revised. Revisions apply to advance payment levels in Manitoba, Saskatchewan, Alberta and British Columbia, which affect the farm debt outstanding for those areas. However, advance payments and farm debt at the Canada level remain the same.

In the third quarter of 2016, two New Brunswick credit unions merged to form a national credit union that has been classified as a bank. As a result, they are included in the chartered banks starting in 2016.

Footnotes:

- The Farm Input Price Index (FIPI) estimates the change in price that farmers pay for inputs into their farming operation 1 through time. A range of administrative price sources are used to calculate this estimate.  
For more information, or to enquire about the concepts, methods or data quality of this release, contact Statistics Canada's National Contact Centre (toll-free 1-800-263-1136; 613-951-8116; statcan.infostats-infostats.statcan@canada.ca) or the

Footnotes:

1 For historical data prior to 1971, for Canada and provinces, excluding Newfoundland and Labrador, see archived table 32-10-0326. Historical quarterly data are available in the archived table 32-10-0290.

2 Period I: inventories at July 1. Period II: inventories at January 1 of the following year.

3 Data for 'sows farrowed and sows bred to farrow' and 'pigs born' are available in table 32-10-0146.

4 Data for 'pigs saved' are available in table 32-10-0147 as 'pig crop'.

Footnotes:

There are no estimates for December 1, 1973, due to the change in the survey date to January 1, which began in 1974. Beginning in 1975, the June 1 survey date was changed to July 1. Beginning in July 1, 1976, Newfoundland 1 and Labrador is included in the Canada total.

The inventory data for each period cannot be aggregated to make an annual total. The inventory data is a count 2 at a specific point in time.

Footnotes:

1 As of 2006, total supply and total disposition of sheep and lambs are calculated using the total interprovincial import and export values instead of the net value.  
2 A residual is arrived at by taking the number of animals leaving for farming operations outside that province minus the number of animals coming from other provinces.  
3 As of 2006, interprovincial import and export values of sheep and lambs are published as the total value instead of the net value.

Footnotes:

- Farm surveys collect data from Quebec, Ontario, Manitoba, Saskatchewan and Alberta at all five survey occasions during the crop year (which extends from the December to the following November occasion). However, data are collected twice a year (in the June Farm survey on seeded areas and in the November Farm survey on final crop production) for Newfoundland and Labrador, Prince Edward Island, Nova Scotia, New Brunswick and British Columbia, which represent between 2% and 4% of national totals. As of July 2014 for the Atlantic provinces and British Columbia, July and September production estimates are calculated using the final estimates of the last three crop years. The harvested area is first estimated based on the ratio obtained from the sum of harvested areas of the last three years over the sum of the seeded areas of the last three years. This average ratio is applied to their current year's reported seeded acreage from the June survey. This estimated harvested area is then multiplied by
- 1 the average yield of the last three years to estimate production.
- 2 For imperial data see CANSIM table 001-0017.
- Seeded area, yield and production of all wheat in Alberta include relatively small estimates of winter wheat for
- 4 years 1921 to 1977.
- 9 Data for British Columbia begin in 1910.
- Totals may not equal the sum of their parts due to the use of conversion factors or rounding of fractions to whole
- 31 numbers.
- 34 All wheat includes spring wheat, durum wheat and winter wheat seeded in the fall.

The harvested area is first estimated based on the ratio obtained from the sum of harvested areas of the last three years over the sum of the seeded areas of the last three years. This average ratio is applied to their current year's reported seeded acreage from the June survey. This estimated harvested area is then multiplied by the average yield of the last three years to estimate production.

Totals may not equal the sum of their parts due to the use of conversion factors or rounding of fractions to whole numbers.

Footnotes:

- 1 Crop year refers to the period August 1 to July 31.
- 2 Prior to crop year 1985/1986, harvested area data for Canada and provinces are not available.

Prior to crop year 1985/1986 for all provinces, except Quebec, the average yield is based on yield per seeded area. For Quebec, average yield is based on seeded area prior to crop year 1993/1994.
- 3 area. For Quebec, average yield is based on seeded area prior to crop year 1993/1994.

For crop years 1985/1986 to 1992/1993 for Canada, the average yield per acre is based on a combination of
- 4 average yield per seeded area and average yield per harvested area.

Prior to crop year 1982/1983, the amount sold, consumed, seeded or fed to livestock data for Canada and the
- 5 provinces are not available.
- 6 Prior to crop year 1986/1987, excludes the potatoes fed to livestock.
- Prior to crop year 1953/1954 for Canada, Prince Edward Island and New Brunswick; crop year 1974/1975 for Nova Scotia and Ontario; crop year 1976/1977 for Québec; crop year 1981/1982 for Manitoba; and crop year
- 7 1985/1986 for Saskatchewan, Alberta and British Columbia, average farm price is based on production.

For crop years 1954/1955 to 1986/1987 for Canada, the average farm price is based on a combination of
- 8 seeded and fed to livestock.

average farm price per hundredweight of production and average farm price of amount sold, consumed,

F : too unreliable to be published.

.. : not available for a specific reference period

E : use with caution

Footnotes:

- 1 Data expressed in imperial and metric units of measure may not always be equivalent due to rounding.  
Conversion factors used for 1 bushel of apples from 1926 to 1964 equals 45.0 pounds, 1965 equals 44.5 pounds, 1966 equals 44.0 pounds, 1967 equals 43.5 pounds, 1968 equals 43.0 pounds, 1969 equals 42.5 pounds, from 1970 on equals 42.0 pounds.
- 2 equals 43.0 pounds, 1969 equals 42.5 pounds, from 1970 on equals 42.0 pounds.
- 3 The value of the crop from 1984 onward is not comparable to previous years because of a change in reporting techniques for New Brunswick only.
- 4 Cultivated area includes bearing and non-bearing area.  
  
Prior to 1987, total production includes figures from on-farm land and unmanaged Crown land. As of 1987, only on-farm production and value are available. Unmanaged
- 5 Crown land is excluded beginning in 1987.
- 6 Includes low bush blueberries and high bush blueberries.
- 7 As of April 27, 1983, revisions back to 1926 in British Columbia were carried out to reflect that 1 quart equals 1.25 pounds.

Footnotes:

Farm surveys collect data from Quebec, Ontario, Manitoba, Saskatchewan and Alberta at all five survey occasions during the crop year (which extends from the December to the following November occasion). However, data are collected twice a year (in the June Farm survey on seeded areas and in the November Farm survey on final crop production) for Newfoundland and Labrador, Prince Edward Island, Nova Scotia, New Brunswick and British Columbia, which represent between 2% and 4% of national totals. As of July 2014 for the Atlantic provinces and British Columbia, July and September production estimates are calculated using the final estimates of the last three crop years. The harvested area is first estimated based on the ratio obtained from the sum of harvested areas of the last three years over the sum of the seeded areas of the last three years. This average ratio is applied to their current year's reported seeded acreage from the June survey. This estimated harvested area is then multiplied by the average yield of the last three years to estimate 1 production.

31 Totals may not equal the sum of their parts due to the use of conversion factors or rounding of fractions to whole numbers.
