Goals and Management Objectives

Forest Management on Prince Edward Island (P.E.I.) means different things to different people. Public Forest Lands are managed for a variety of reasons including timber and non-timber values, wildlife enhancement, soil and water preservation, demonstration techniques, training and recreation and aesthetics.

The primary goal for management of P.E.I. Public Forest Land is to enhance the overall forest quality. To accomplish this, it may be necessary to remove some of the lower quality trees on the property and nurture those of higher quality. This will in turn improve genetic quality, species distribution and diversity through careful tree selection and natural regeneration. Allowing acceptable growing stock the chance to thrive and provide a seed source for the surrounding areas will ensure that quality natural regeneration has an opportunity to establish. Enhancement or enrichment planting may be necessary in areas where there is inadequate or unsuitable natural regeneration. P.E.I. that are suitable to the site conditions will be chosen for any required reforestation on the property. Prescribing treatments in some stands while leaving others untreated will provide for a range of forest types. Converting stands from a single species to multiple species is desirable. This can be accomplished by retaining some of the natural regeneration in areas that have been previously planted and by planned tree selection in stand improvement treatments. Planted and natural stands on the property will be assessed for health and growth of desired species on an on-going basis. This information will be used to determine when and where future treatments will be carried out. Through time, a favourable healthy mixture of short-lived and long-lived species will provide for an abundance of quality forest products, biodiversity, wildlife, and recreational opportunities as well as a range of ecological goods and services (such as clean air and water).

Property Overview

Location

Property #28261 is located on the McNeills Mills Road, Route #134, in the community of McNeills Mills, P.E.I., (Appendix A). The total area of this property is 11.52 hectares (28.8 acres) and the midpoint of the property is Latitude N 46.63162 decimal degrees, Longitude W -63.98727 decimal degrees.

Past Information

Local records and previous aerial photography show that the property was predominately agriculture fields and was subsequently used as a car track. Since being abandoned, the site has partially been reclaimed to forests with the remainder reverting to heavy alder. To better illustrate this 1935 and 1968 photography can be seen in Appendix B and Appendix C.

Property Information

The information in Appendix D has been taken from the 2010 Corporate Land Use Inventory. An explanation of forestry code meanings can be seen in Appendix E. Any stands that have proposed silvicultural treatment prescriptions are to have on-ground stand assessments completed prior to any work being started. This on-ground assessment information is included in this plan as updated stand tally sheets (Appendix F) and supplements the extrapolated data where applicable. A topographic map of the property shows the general terrain profile, the ranges in elevation and the plantations currently on the property (Appendix G).

There is evidence of habitation (old camper trailer) near the south west corner of the property.

It appears that this straddles the private land right-of-way that borders the west boundary and this

public land parcel. This is to be investigated further during the summer when it would most likely be occupied.

Wetland and Watercourses

There is one wetland located in the northeast portion of the property. A 15 m riparian buffer is to be applied to the wetland should any activity occur in this vicinity. This observation can be viewed in Appendix A.

Property Access

The property can be accessed from the McNeills Mills Road. An old abandoned road is still present which can be used with some minor vegetation (alder) removal. The south part of the old track is also useable as access for harvest operations and stockpiling and hauling wood.

Property Boundaries

This property is bounded on the south by the McNeills Mills Road. and east, west and north by private land.

Fire Protection

This property is located within the jurisdiction of the Tyne Valley Fire Department. The amount of personnel and equipment used to fight any forest fires will depend greatly upon the size and severity of the fire. Protection of our woodland from forest fire is the responsibility of the Forests, Fish and Wildlife Division and our local community fire brigades. In the Western District, there is a 900 gallon (gal) four-wheel drive forestry fire truck housed at each of the Wellington and West Point Fire Departments. These heavy-duty trucks are available to assist the local fire department responsible for

this area. Additional forestry fire trucks, off road tracked vehicles, portable pumps and specialized forest fire suppression equipment are available if needed.

Planting and Silviculture

There are no plantations on the property. It is recommended that any trees planted on the property be assessed at regular intervals. These assessments will determine if the planted trees require manual maintenance or fill planting as specified in the ECOSYSTEM-BASED FOREST MANAGEMENT STANDARDS MANUAL ("Eco Manual"). A list of all silviculture treatments completed on the property from 1991 to present is shown in Appendix H.

Proposed Treatments

The 2006 Forest Policy "Moving to Restore a Balance in Island Forests" lays out the framework for Public Land Forest management. The Eco-Manual provides details for prescribed treatments. All work completed on this property must comply with that manual. Although all stands were assessed, only specific stands were prescribed treatments to accomplish goal(s) within the next 10 years. Table 1 provides a summary of these proposed treatments. Proposed treatments may be updated in 5 years, when the 10-year period expires, or due to unforeseen events. This table will be updated as required when additional treatments are prescribed. For a better understanding of the treatments prescribed, a more detailed explanation is available in the ECOSYSTEM-BASED FOREST MANAGEMENT STANDARDS MANUAL ("Eco Manual")

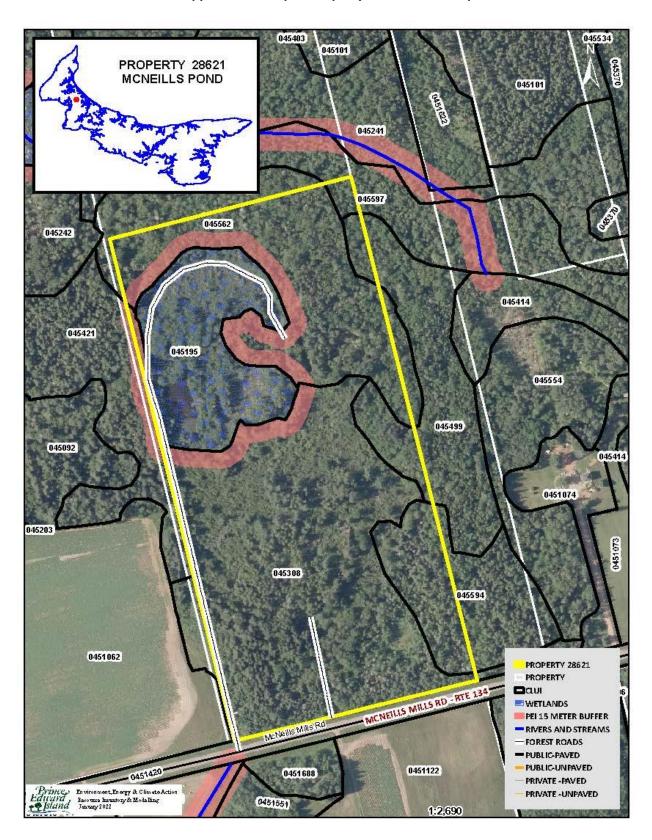

<u>www.princeedwardisland.ca/sites/default/files/publications/2018_eco_manual_technical_version_-</u>
<u>final.pdf</u>. Any additional information may be obtained by contacting a Provincial Forest representative at the District Forestry Office in Wellington.

Table 1. Proposed Treatment Summary.

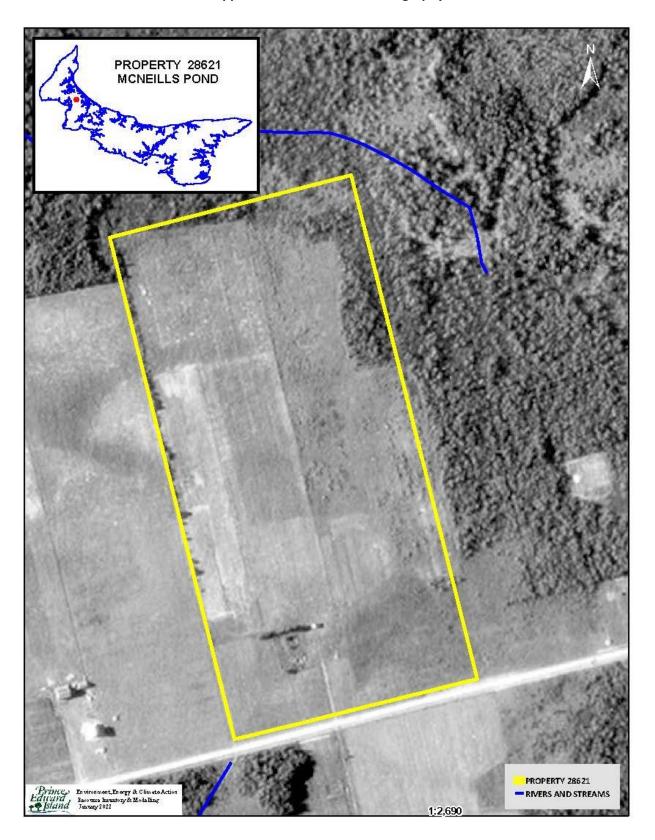

Stand Number and Plantation Number	Treatment Type	Treatment Year	Amount Proposed	2018 Eco- Manual Reference	Comments	Goals
Road	Road Maintenance	2022	200 m	Pg 12	Brush cutting on road and part of old racetrack. This access can be used as a landing area as well by cutting a few adjacent trees.	Provide useable access
45308 45594	Patch Harvest	2022	0.7 ha	Pg 29	Salvage SW and some PO. Retain any RM.	Salvage mature softwood
45562 45499	Selective Harvest	2022	0.3 ha	Pg 31	Salvage SW and some PO. Retain all other HW. Low volume of SW wood present.	Salvage mature softwood and some poplar. Diversify tree species.
45308 45594	Manual Site Preparation and Reforestation	2023	0.7 ha	Pg 14, 16	Create plantable spots and plant species suited to the site.	Reforest the harvest area and diversify tree species
45562 45499	Manual Site Preparation and Reforestation	2023	0.3 ha	Pg 14, 16	Create plantable spots and plant species suited to the site.	Reforest the harvest area and diversify tree species
45308 45499	Manual Plantation Maintenance	2026	0.7 ha	Pg 17	Eliminate undesirable competing vegetation	Improve growth of crop trees

SAMPLE DESCRIPTIONS

FOREST STAND DESCRIPTIONS

75401 – Stand No.

SM5RM4 – Sugar Maple 50%, Red Maple 40%

WS1 12A – White Spruce 10%, Height, Crown Closure

OF – Origin History Old Field

Stand Numbering relates to the position of the stand within a 100 X 100 grid cell over lay with the minimum values in the southwest corner and the maximum values in the northeast corner.

A stand labeled $75\,40\,1$ would be positioned within easting grid 75 and northing grid 40 and would be the first stand within that grid cell.
